Storage Boxes

The increasing energy density of lithium-ion batteries and the unstoppable use of these energy sources in all industrial sectors, inevitably lead to significantly greater potential for danger - transport damage, self-ignition potential, production damage, etc.

The double-walled metal walls and the lid of the special containers are filled with PyroBubbles®.
Batteries or cells in cartons or other storage containers are quickly and easily stored and protected.

Our Storage Box system is a simple, weather-resistant, safe and flexible solution for storing lithium-ion batteries for all industrial sectors.

This works to remove the need for expensive fire protection or segregation on site, as each product is contained and protected.
